Quantitative Investment Rotational Program

Fidelity’s Quantitative Investment Rotational Program is designed to provide talented and highly motivated graduates with firsthand experience in quantitative research and data analytics within our asset management divisions. This program seeks to accelerate your development through structured rotational assignments, on-the-job learning, and supplemental training.

The program is composed of four six-month rotations across a range of asset classes and groups, including Equity, Fixed Income and Asset Allocation. In addition to on-the-job experience, participants will receive structures mentorship, networking and development opportunities, and formalized training.

Upon successful completion of the program, you will have the opportunity to be placed in a permanent position at Fidelity based on your interests and business needs.

From a Quant Associate…
Natalie Knight
Dartmouth College, Class of 2019

“The Program has provided me with an unparalleled opportunity to learn from Quants and other professionals in different areas of Asset Management, while also allowing me to own my work and projects. I value constantly learning about all aspects of this industry and continue to both learn new skills and hone old ones.”
